

ECE 602 Lumped System Theory Final Syllabus

The chapter and section titles, along with the chapter, section, and page numbers, refer to the textbook, *Linear System Theory and Design*, 4th edition, by Chi-Tsong Chen.

RA = Reading Assignment (reinforces lecture but not covered in lecture). Students are responsible for the material in these sections as well as that in the sections covered in class. Have a question about this material? Email the instructor or ask the assistant.

Definitions and Notation, Transfer Functions and Linearization

Chapter 1: Introduction	1
(RA): 1.1 Introduction	1
(RA): 1.2 Overview	2
Chapter 2: Mathematical Descriptions of Systems	6
(RA): 2.1 Introduction	6
(RA): 2.2 Causality, Lumpedness, and Time Invariance	7
(RA): 2.3 Linear Time-Invariant Systems	11
2.3.1 Multi-input Multi-output Case	18
(RA): 2.4 Linear Time-Varying Systems	19
2.4.1 Linearization	20
(RA): 2.5 RLC Circuits – Comparisons of Various Descriptions	21
(RA): 2.6 Mechanical and Hydraulic Systems	30
(RA): 2.7 Concluding Remarks	48
(RA): 2.8 Discrete-Time Linear Time-Invariant (LTI) Systems	40

Lecture 1 Linear Algebra and The Cayley Hamilton Theorem

Chapter 3: Linear Algebra	55
(RA): 3.1 Introduction	55
(RA): 3.2 Basis, Representation, and Orthonormalization	56
(RA): 3.3 Linear Algebraic Equations	61
3.4 Similarity Transformations	66
3.6 Functions of a Square Matrix	75

Lecture 2 Solutions of State Space Initial Value Problems (IVPs)

Chapter 3: Linear Algebra (continued)	
3.5 Diagonal Form and Jordan Form	68
3.6 Functions of a Square Matrix (continued)	

Lecture 3 Chapter 4: State-Space Solutions and Realizations	101
4.1 Introduction	101
4.2 General Solution of CT LTI State Equations	103

Lecture 4 Solving Linear Time Invariant (LTI) State Equations

Chapter 4: State-Space Solutions and Realizations	101
4.2 General Solution of CT LTI State Equations (continued)	103

Lecture 5 Solving Linear Time-Invariant (LTI) State Equations (continued)

Chapter 4: State-Space Solutions and Realizations (continued)	
4.2 General Solution of CT LTI State Equations (continued)	103
4.2.1 Discretization	106
4.2.2 General Solution of DT LTI State-Space Equations	108
4.4 Equivalent State-Space Equations	115
(RA): 4.4.1 Canonical Forms	120

Lectures 6-7 Solving Linear Time-Invariant (LTI) State Equations (continued)

Chapter 4: State-Space Solutions and Realizations (continued)	
4.6 Solution of Linear Time-Varying (LTV) Equations	133
4.6.1 Discrete-Time Case	138

Lecture 8 Realizations

Chapter 4: State-Space Solutions and Realizations (continued)	
(RA): 4.5 Realizations	124
4.5.1 Multi-input Multi-output Case	128

Lecture 9 BIBO Stability (Zero State Response)

Chapter 3: Linear Algebra (continued)	
3.11 Norms of Matrices	93
Chapter 5: Stability	149
5.1 Introduction	149
5.2 Input-Output Stability of LTI Systems	149

Lecture 10 BIBO Stability (Zero State Response) continued

Chapter 5: Stability (continued)	149
5.3 Discrete-Time Case (of Input Output Stability)	158

Lecture 11 Internal Stability (Zero Input Response)

Chapter 5: Stability (continued)	
5.4 Internal Stability	163
5.4.1 Discrete-Time Case	165

Lecture 12 Lyapunov Theorem and Stability of LTV Systems

Chapter 3: Linear Algebra (continued)

 3.7 Lyapunov Equation 84

 3.9 Quadratic Form and Positive Definiteness87

Chapter 5: Stability (continued)

 5.5 Lyapunov Theorem166

 5.5.1 Discrete-Time Case 169

 5.6 Stability of LTV Systems172

Lecture 13 Review of Chapter 5

Lecture 14 Controllability of CT LTI Systems

Chapter 6: Controllability and Observability 178

 6.1 Introduction 178

 6.2 Controllability 179

Lecture 15 Controllability of DT LTI Systems

Chapter 6: Controllability and Observability (continued)

 6.6 Discrete-Time State-Space Equations 205

 6.6.1 Controllability to the Origin and Reachability 208

Lecture 16 Observability of CT LTI Systems

Chapter 6: Controllability and Observability (continued)

 6.3 Observability188

 6.3.1 Observability Indices 192

 6.6 Discrete-Time State-Space Equations 205

Lecture 17 Controllability Indices

Chapter 6: Controllability and Observability 178

 6.2 Controllability continued 179

 6.2.1 Controllability Indices 185

Lecture 18 Controllability and Observability with Sampling

Chapter 6: Controllability and Observability (continued)

 6.7 Controllability After Sampling209

Lecture 19 Kalman Decomposition

Chapter 6: Controllability and Observability (continued)

6.4 Kalman Decomposition	194
Lecture 20 Controllability and Observability of LTV Systems	
Chapter 6: Controllability and Observability (continued)	
6.8 LTV State Equations	212
Lecture 21 Review of Chapter 6	
Lecture 22 State Feedback	
Chapter 8: State Feedback and State Estimators	274
8.1 Introduction	274
8.2 State Feedback	275
Lecture 23 State Estimators	
Chapter 8: State Feedback and State Estimators (continued)	
8.4 State Estimator	291
Lecture 24 Balanced Realizations	
Chapter 3: Linear Algebra	55
3.10 Singular-Value Decomposition	91
Chapter 7: Minimal Realizations and Coprime Fractions	221
7.4 Balanced Realization	237
Lecture 25 Minimal Realizations	
Chapter 7: Minimal Realizations and Coprime Fractions (continued)	
7.1 Introduction	221
7.2 Implications of Coprimeness	222
7.2.1 Minimal Realizations	226
Lecture 26 Review	
Lecture 27 Review	
Lecture 28 Review
